

We seek a self driven and responsible **Lead – Android/iOS Developer** for the technical integrity of digital products, while providing technical guidance to the team at project level.

ONUS TO DO:

- ✓ Lead to drive the feasibility review and performance evaluation through creative concepts and technological solutions.
- ✓ Provide hands on program management during analysis, design, development, testing, implementation and post implementation phases.
- ✓ Communicate status and big picture to the project team and management while interfacing with engineers and product teams for product requirements and scope.
- ✓ Strong coding abilities and experience with Java and native Android SDK and Integration of 3rd party SDK like payments, analytics and other services.
- ✓ Prototype new and redesign features with programming skills to develop highly innovative, consumer-facing mobile products.
- ✓ Design and implement scalable, reliable, and maintainable technologies for our mobile platform.
- ✓ Integrate and implement Connectivity APIs, Android Location API, Google maps API, and Google places API.
- ✓ Review and provide constructive feedback on software requirements, design, and architecture to other members of the Product Management, Engineering and QA teams.
- ✓ Review and provide constructive feedback to code developed by other members of the Engineering team.

WHAT IT TAKES :

- ✓ Thorough understanding of Android architecture platform and libraries with in depth knowledge of web services like JSON, XML, HTTP.
- ✓ Strong interests in location-based real-time interaction, social apps and other mobile sensors and appealing user interfaces shall be an added advantage.
- ✓ Minimum 3+ year experience with native Android applications in Java with object-oriented software development.
- ✓ Concurrency in Android, Connectivity APIs and Android Location API.

- ✓ Thorough knowledge and hands-on experience on Android programming and SQLite DB.
- ✓ Experience in understanding large and complex code bases, including API design techniques to help keep them clean and maintainable.
- ✓ Proficient in the technologies: Java language and related frameworks, Multi-Threading and memory management specific to mobile devices.
- ✓ Integration of social media API like Facebook, Twitter etc.
- ✓ Self- motivated, proactive with demonstrated creative and critical thinking
- ✓ Should be a B.Tech/BE/MCA/diploma in Computer Science or Electronics

INDIVIDUALITY :

- ✓ We need our engineers to be versatile and always eager to tackle new problems as we continue to push technology forward.
- ✓ Multitasking ability with good communication and analytical skills.
- ✓ Flexible, creative and able to meet deadlines.
- ✓ Leave comfort zone and stretch further to support creative risk.
- ✓ Self-starter, that is, able to collaborate actively with others in a cross-functional team.
- ✓ Roll-up your sleeves- attitude to get things done and ability to deal with ambiguity and change.
- ✓ Passionate and intimately knowledgeable about all things on web and mobiles.

Key Skills: Android; Core Java; JSON; REST

Secondary Skills: Database - Oracle, SQLite, Mysql
